

More value - made to measure NEW: Repair Kits Front Axle for Audi, Skoda and Volkswagen

Manufacturers and garages are all agreed: For safety and comfort, it is recommended to replace all suspension arms of vehicles with multi-link axles at both sides at the same time; state-of-the-art technology – and it's worth it!

This is why QUINTON HAZELL is now offering six more made-to-measure repair kits in OE-quality for front axles in addition to the existing highly successful QSJ5003K repair kit. These kits are for vehicles of the manufacturers Audi, Skoda and VW, starting with the year of production 2000.

As the first supplier in the market, QUINTON HAZELL will also be offering repair kits for vehicles with sports suspension from October 2009. The kits include reinforced components which are not only for vehicles with standard sports suspension but they are also ideally suited for cars which have been lowered down later.

MANY ADVANTAGES

- Price advantage in relation to individual parts
- Only available from QUINTON HAZELL
- High degree of vehicle coverage with just six different repair kits
- Top production standards, perfectly matched to the vehicles
- Professional repairs – all needed parts in one kit
- Including mounting bolts and screws
- vehicle-linked in TecDoc
